GENIE Forum - M. Roda

New Genie Release

- We released a new version with the bug fixes about one month ago
 - Various small changes were made to Nieves and Llewellyn-Smith quasielastic models.
 - Most important change was in the handling of binding energy.
 - Delta → nucleon+pion angular distribution is now in the correct frame
 - New Reweight version tagged to be fully compatible with a change in the configuration system

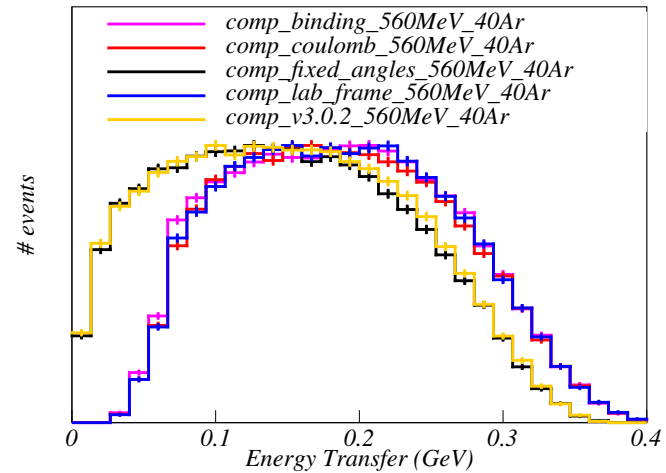

- Detailed technical note is public on the GENIE docdb
 - <https://genie-docdb.pp.rl.ac.uk/cgi-bin/ShowDocument?docid=113>
 - The version released in the email announcement was not complete

New Genie Release

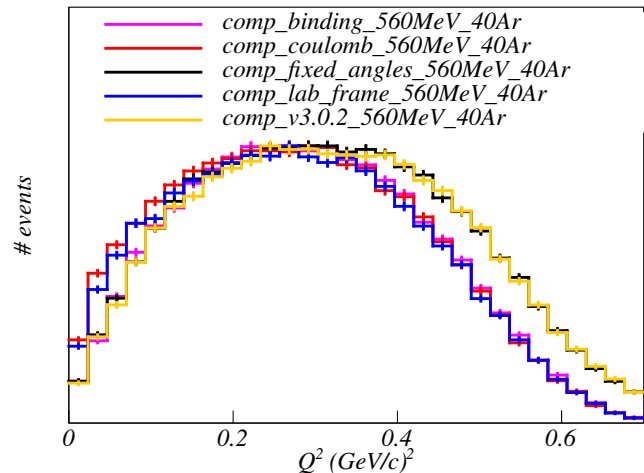

CCQE ν_{α} - ^{40}Ar @ $E = 0.56 \text{ GeV}$

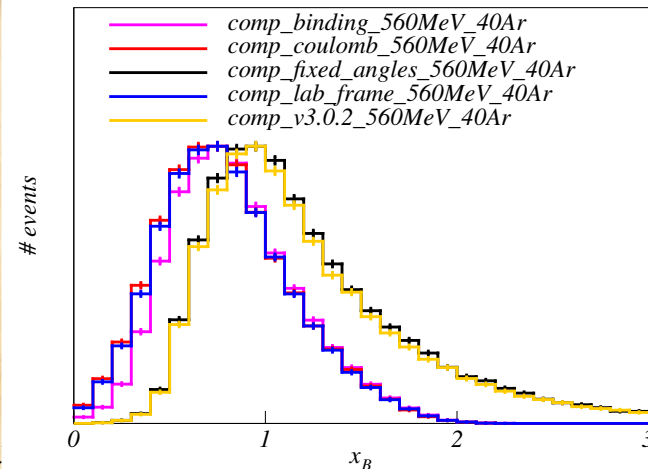

CCQE ν_{α} - ^{40}Ar @ $E = 0.56 \text{ GeV}$

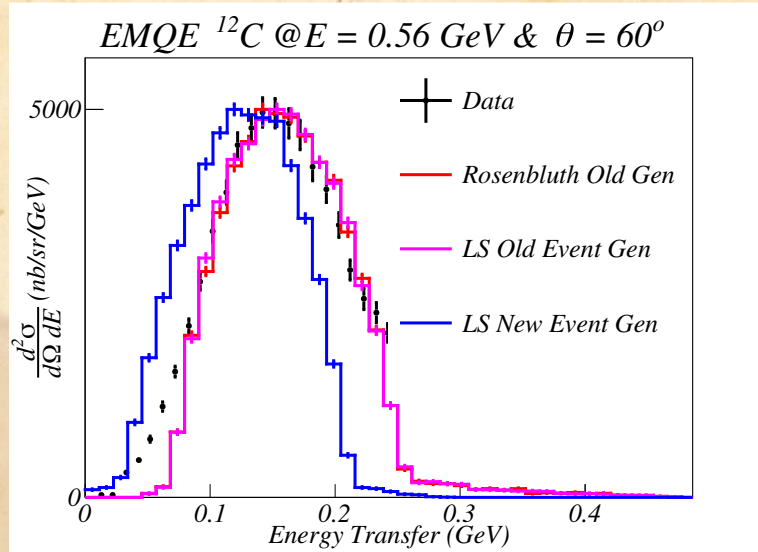

CCQE ν_{α} - ^{40}Ar @ $E = 0.56 \text{ GeV}$

CCQE ν_{α} - ^{40}Ar @ $E = 0.56 \text{ GeV}$

The New Genie release

- Tests have been carried on also for electron scattering
- It was where the problem was first observed

Nuance Codes

- Minor issue for LArSoft User
 - Nuance codes about the event type were problematic and not mutually exclusive
 - This is known <https://cdcvns.fnal.gov/redmine/issues/18025>
- RES interaction with 2 pions in the final state returns a not valid Nuance code
- GENIE is not going to support this
- The proper evaluation of those codes needs to be written within LarSoft
- Reference to the relevant piece of code
 - https://nusoft.fnal.gov/larsoft/doxsvn/html/MCNeutrino_8h_source.html#l00081
 - https://nusoft.fnal.gov/larsoft/doxsvn/html/GENIE2ART_8cxx_source.html - Line 281

Feedback session

- As mentioned in one of the first forums, we would like to have a feedback session for the forum
 - To see if we need changes in the structure
 - To improve what we have
 - Etc...
- The feedback session will be next time, Wednesday 19th June
 - In preparation for that I will be happy to receive any feedback you have about the forum
 - It would be helpful to guide the discussion
