# Toward v3.2

- Things keep getting into the master branch in preparation for v3.2
- Specifically
  - Change in the Hadronization names
    - Beginning into a phase in which a number of Hadronization models will be available
  - Also that included a minor fix for Charm production
    - Charmed mesons production stopped at 100 GeV
    - Fix mostly relevant for Telescopes
- We started to review Alfonso's pull request for very high energies.
  - It's a lot of work it might take time
- The complete report (as of today) is available at the usual link <http://releases.genie-mc.org/>

Happy Holidays!
