

# Follow-up from September GENIE Forum

- Slides from DUNE interaction model effort ("DIRT-II")
  - <https://genie-docdb.pp.rl.ac.uk/cgi-bin/private/ShowDocument?docid=330>
- Several requests made for an upcoming GENIE release
- NuWro-like radial dependence in LFG nucleon removal energy (slide 9)
  - Code looks reasonable, needs to be XML-configurable to harmonize with other options
- Add Benhar SF table for  $^{40}\text{Ar}$  (in NEUT?)
  - Doable, unclear if existing SpectralFunc nuclear model has been validated
- hA2018 bug fix (slide 15)
  - "The Steves" checked it, agreement that the fixes should be made as proposed
- Assertion ``s>0'` failed (slide 6)
  - Hit nucleon rest frame problem

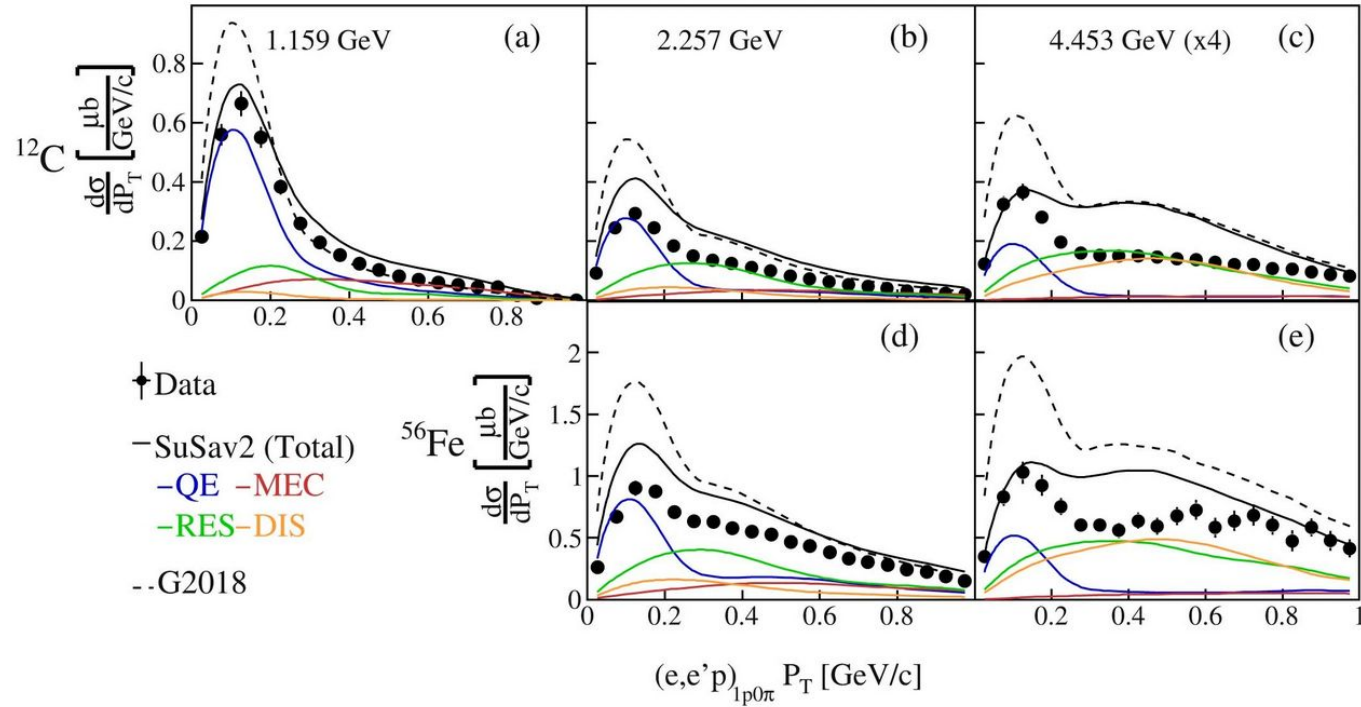

# Trouble with the hit nucleon rest frame

- Important parts of the framework work with the rest frame of the initial hit nucleon
  - Probe energy threshold checks
  - Kinematic limits for  $Q^2$ ,  $W$ , etc.
  - Some differential cross sections
- Bound nucleons are off-shell, and this can be problematic in some cases
  - $\beta$  for the "into rest frame" boost can exceed 1
  - Invariant mass of the nucleon becomes imaginary
  - Leads to failed assertions in multiple places
- Discussion of solutions ongoing
  - Best strategy seems to be changing the working frame for all relevant checks
  - Overleaf for working out the math: <https://www.overleaf.com/project/5fc130f9b8fd2350110f0531>
  - Task force: Marco, Afro, Steven
  - More detailed update when we have a full proposal on how to move forward

# EMRES Overestimation Issue Addressed

## Accidentally using neutrino form factors for EM scattering

```
761 void BSKLNBaseRESPXSec2014::LoadConfig(void)
762 {
763     // Cross section scaling factors
764     this->GetParam( "RES-CC-XSecScale", fXSecScaleCC );
765     this->GetParam( "RES-NC-XSecScale", fXSecScaleNC );
766
767     // Load all configuration data or set defaults
768
769     this->GetParam( "RES-Zeta" , fZeta );
770     this->GetParam( "RES-Omega" , fOmega );
771     this->GetParam( "minibooneGA", fGA );
772     this->GetParam( "minibooneGV", fGV );
```

```
298
299     if(fGV){
300
301         LOG("BSKLNBaseRESPXSec2014", pDEBUG) <<"Using new GV";
302         double CV0 = 1./(1-q2/fMv2/4.);
303         double CV3 = 2.13 * CV0 * TMath::Power( 1-q2/fMv2, -2);
304         double CV4 = -1.51 * CV0 * TMath::Power( 1-q2/fMv2, -2);
305         double CV5 = 0.48 * CV0 * TMath::Power( 1-q2/fMv2/0.766, -2);
306
307         double GV3 = 0.5 / TMath::Sqrt(3) * ( CV3 * (W + Mnuc)/Mnuc
308             + CV4 * (W2 + q2 - Mnuc2)/2./Mnuc2
309             + CV5 * (W2 - q2 - Mnuc2)/2./Mnuc2 );
310
311         double GV1 = - 0.5 / TMath::Sqrt(3) * ( CV3 * (Mnuc2 -q2 +Mnuc*W)/W/Mnuc
312             + CV4 * (W2 +q2 - Mnuc2)/2./Mnuc2
313             + CV5 * (W2 -q2 - Mnuc2)/2./Mnuc2 );
314
315         GV = 0.5 * TMath::Power( 1 - q2/(Mnuc + W)/(Mnuc + W), 0.5-IR)
316             * TMath::Sqrt( 3 * GV3*GV3 + GV1*GV1);
317     }
